EDUCATION

Texas A&M University

Expected Dec 2027

B.S. in Computer Science, Minor in Mathematics

GPA: 3.80/4.00

- **Honors:** Craig and Galen Brown Engineering Honors, Dean's Honor Roll
- **Coursework:** Data Structures & Algorithms, Machine Learning, Cloud Computing, Computer Systems, Computer Organization, Software Engineering, Data Analytics & Cybersecurity, Competitive Programming

EXPERIENCE

IBM

Aug 2026 – Dec 2026

Software Engineer Intern

- To work on backend systems & AI infrastructure in IBM's watsonx platform

AT&T

Jun 2026 – Aug 2026

Software Engineer Intern

- Strengthened distributed tracing for AI infrastructure, identifying 3 bugs that cut average response latency by 60%
- Instrumented 7 services via OpenTelemetry, correlating traces & logs to support 3 teams and 35,000+ daily traces
- Integrated BigQuery Agent Analytics across 8 AI agents to process 4,600+ daily events into 5 semantic tables
- Implemented thread pooling to parallelize Redis calls in 2 IO-heavy services, reducing p95 response time by 11%

DigiCert

May 2025 – Aug 2025

Software Engineer Intern

- Built Flask microservices automating image verification & signing with C2PA, maintaining <500ms response times
- Designed manifest signing pipeline with validation, hashing, PS256 timestamps, and COSE signature embeddings
- Deployed WordPress plugin authorizing 100+ vendors to sign images, surfacing image provenance & metadata

Aggie Coding Club

Mar 2025 – Present

Projects Chair

- Mentored PMs from 20+ active projects via workshops & check-ins, achieving 85% project completion rate
- Automated workflows with Python scripts, assigning 200+ students to projects & creating Discord channels

Texas A&M University

Aug 2024 – May 2025

Undergraduate Research Assistant

- Trained multiple ML models to predict employee absenteeism in construction workforces, achieving R^2 of 0.82
- Built unified time-series schema from 8 companies, reducing ETL runtime by 50% across 4.9 million hours of data
- Led feature engineering for commute time & weather with historical data, boosting model performance by 4%

PROJECTS

Distributed Flight Reassignment Engine | *Next.js, React Native, FastAPI, Ray, AWS Lambda, WebSockets*

- Engineered a crew assignment engine for flight disruptions, maximizing coverage while validating FAA regulations
- Parallelized an optimization pipeline on AWS to evaluate 80,000+ scenarios across 600+ flights in <10s
- Developed WebSocket infrastructure to support real-time flight maps & mobile app notifications for airline staff

Calendar Sync Extension | *React.js, Supabase, Stripe, Google APIs*

- Built web extension to automatically detect, process, and export coursework updates to Google Calendar & Tasks
- Implemented local file parsing, event hashing & storage, and Google OAuth 2.0 to keep all calendar data client-side
- Shipped to Chrome Web Store with 10+ current alpha testers, won "Best Learning-Focused Project" in ACC

TECHNICAL SKILLS

Languages: Python, Java, C++, C#, TypeScript, JavaScript, Bash

Frameworks & Libraries: React.js, Next.js, Node.js, Express.js, FastAPI, PyTorch

Tools: Git, Linux, Docker, Redis, PostgreSQL, MongoDB, AWS (EC2, S3, Lambda), GCP (Vertex AI, Cloud Run)
